## 1. Introduction

### Program of the Training

Introduction to the day

Start with an individual choice  
of images

Presentation of visual learning  
in different target groups

## Abstracts of Theory 1

**Ernst Cassirer, 1874 - 1945**

**The human being as  
„animal symbolicum“**

**Symbolic forms have an universal and inter subjective validity.**

**The human being designs his reality with the help of symbols.**

**Cassirer understands culture as the way  
the human being produces sense through symbols.**

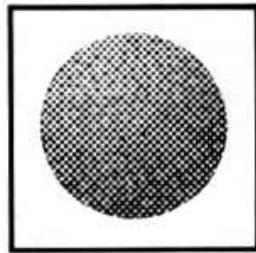

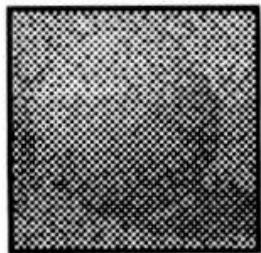

## Abstracts of Theory 2

Rudolf Arnheim, 1905 - 2007

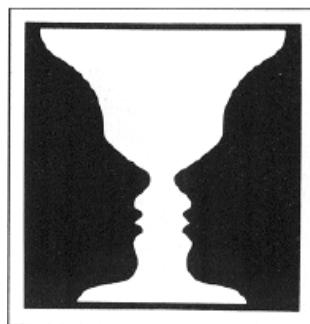

Perception and Recognition

- Gestalt psychology stresses the active achievement of the perceptor.
- Shape/Background Differentiation (**Figur-Grund-Unterscheidung**)
- Perception is always goal oriented and selective.
- Perception generates general patterns of form.
- Perception of form = general characteristics of structure.

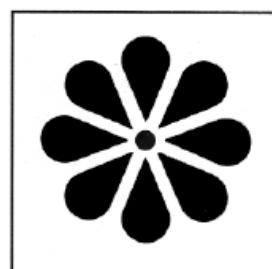

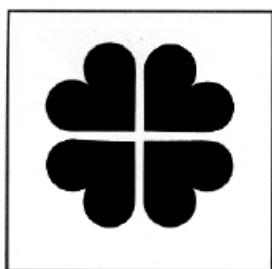

## Laws of „Gestalt“ 1: Shape - Background

Object with / without background

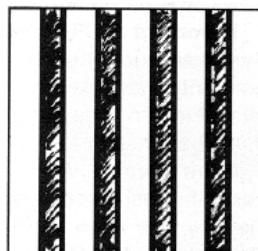

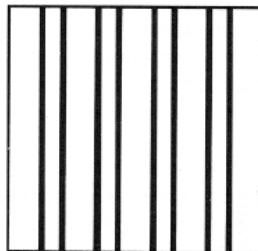

Shape and background  
with similar validity –  
selective perception

Without background only  
geometric forms, no objects  
recognised

## Laws of „Gestalt“ 2:

## Perception „work“

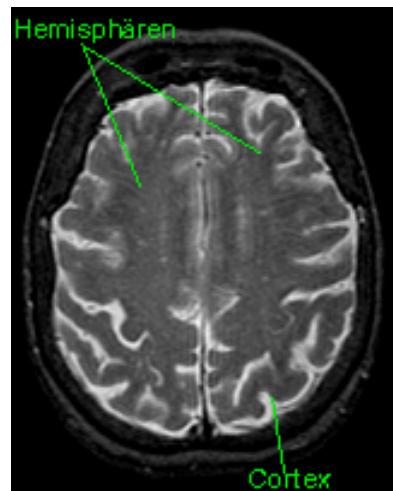

The brain shapes lines into a figure.

White shape on black background seems bigger than black shape on white background.

## Abstracts of Theory 3: Learning Psychology 1

- The hemispheres of our brain work complementarily (verbal and non-verbal system).
- Concept of double coding:  
Information is better saved when reception activates multiple senses.
- Knowledge can be represented by analogy/correspondence statement action.

## Abstracts of Theory 3: Learning Psychology 2

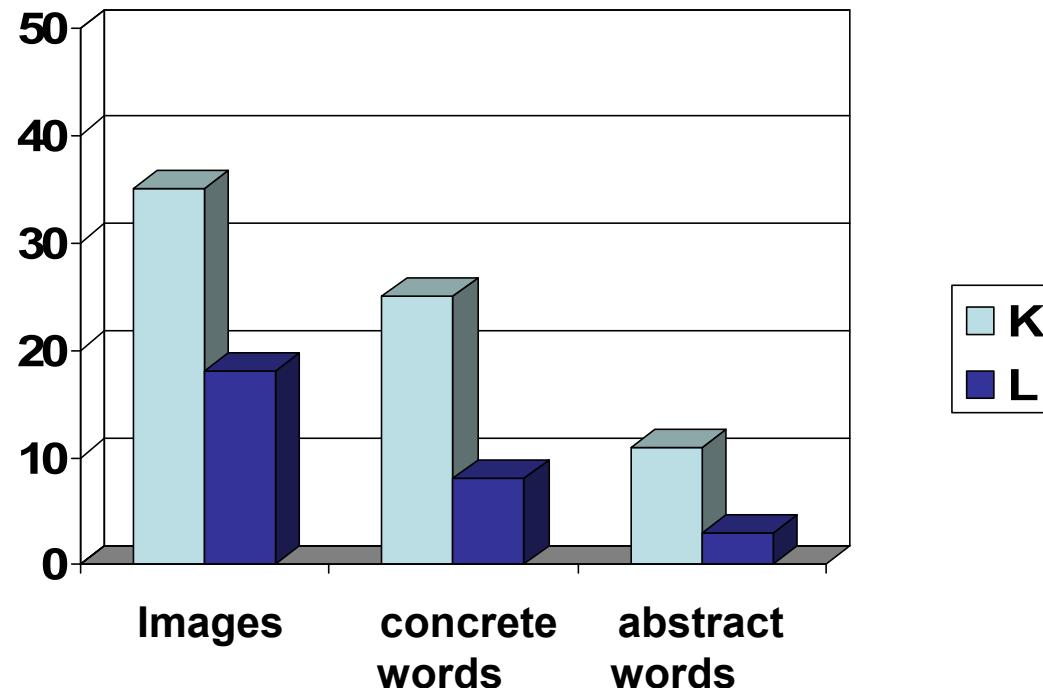

Representation by analogy

How many windows has  
your house on the front  
side?

## Abstracts of Theory 3: Learning Psychology 3

### Memory achievement for images and words

Measuring the recall  
on images and words

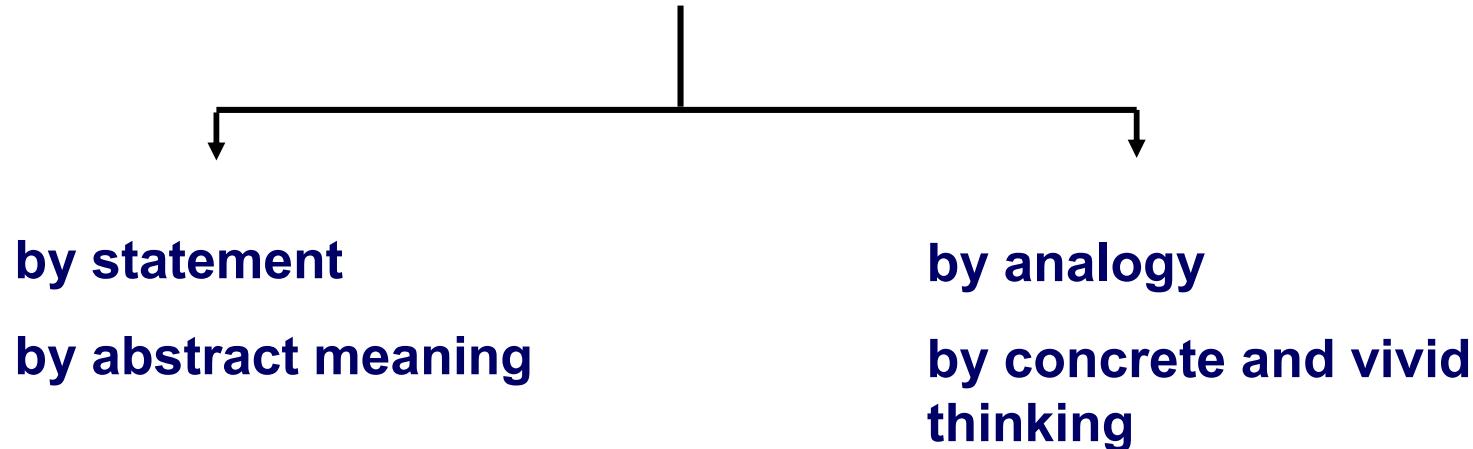

(K) short time:  
5 minutes after reception

(L) long time:  
1 week after reception

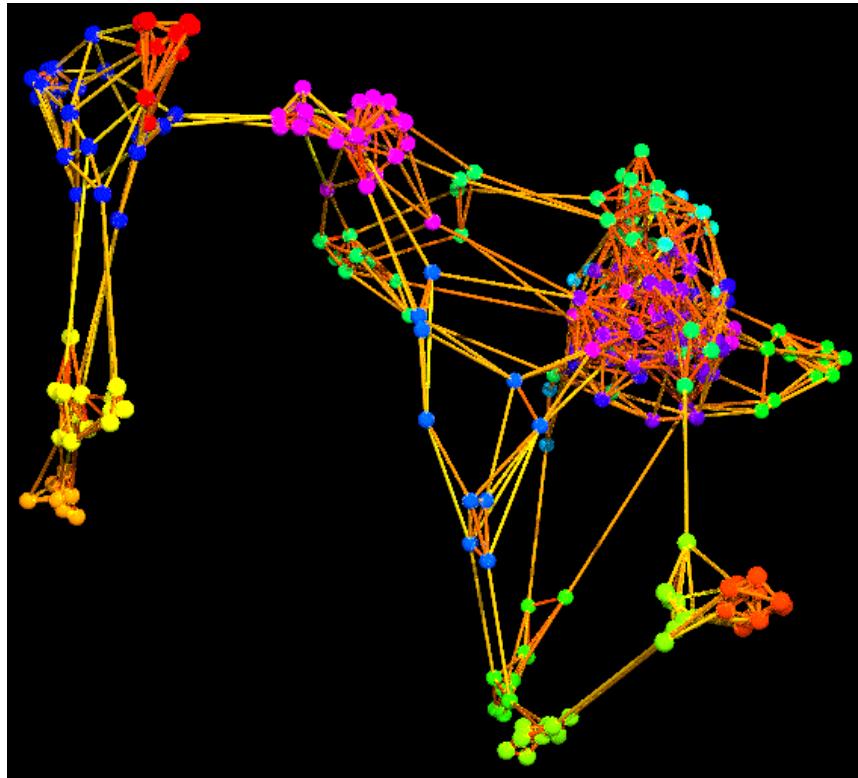

Source: After a classical  
experiment by Paivio.

## Abstracts of Theory 3: Learning Psychology 4

### Multiple Representation of Knowledge

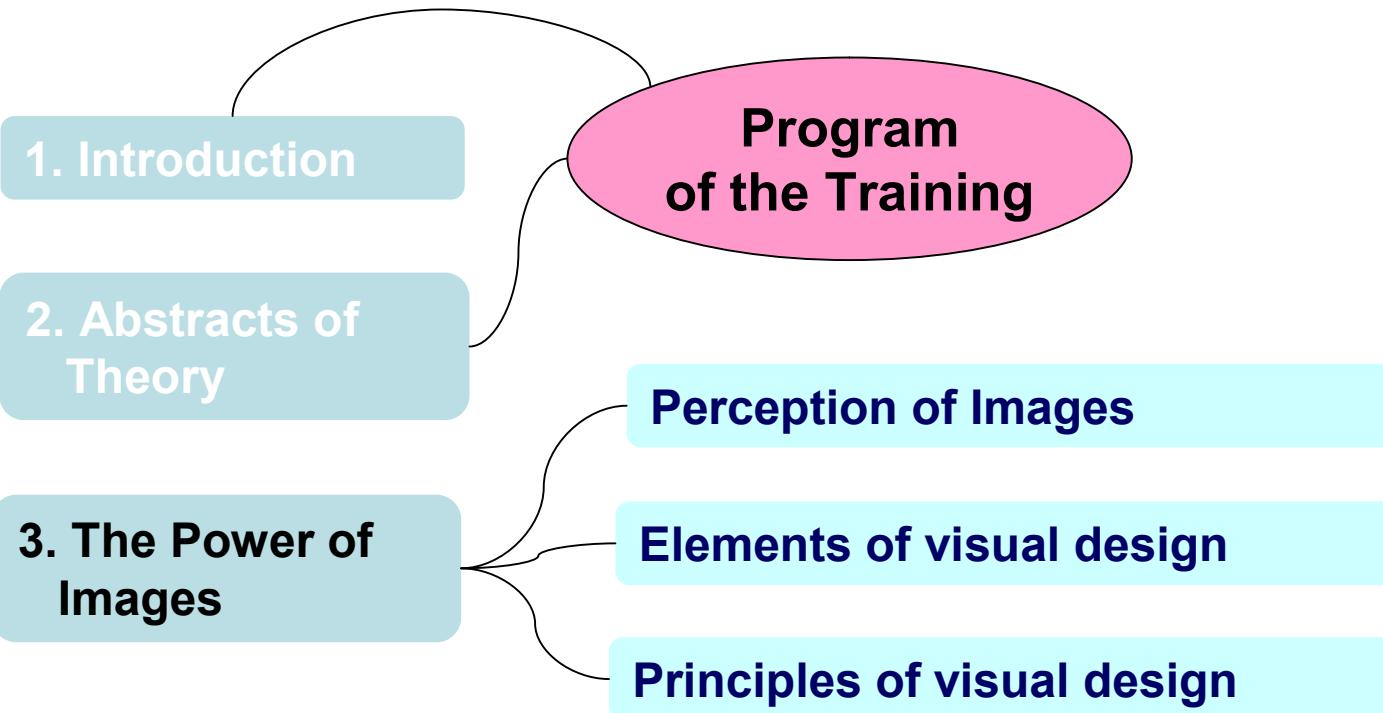

## Abstracts of Theory 3: Learning Psychology 5

**Knowledge is networked:  
Mental patterns represent  
universal structures.  
They integrate knowledge  
related to  
language,  
image and  
action.**

## The Power of Images 1

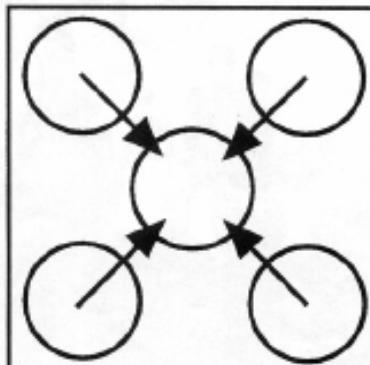

**Ségolène Royal**

## The Power of Images 2

### The Center

Circle from  
inside to outside

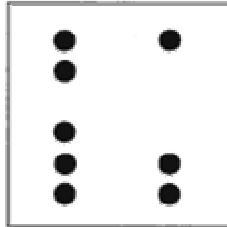

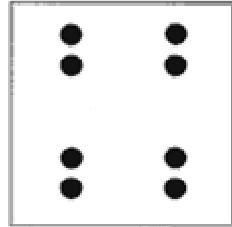

Circle as center

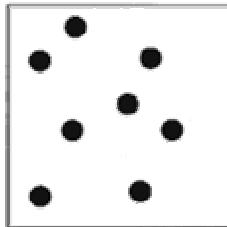

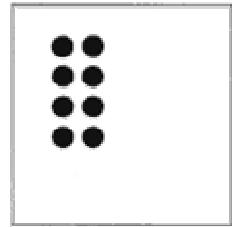

The desire for the center  
refers to circle and  
symmetry.

## Power of Images 3 – Elements of visual design

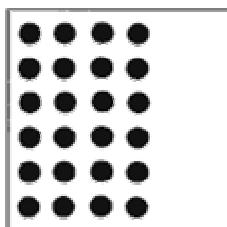

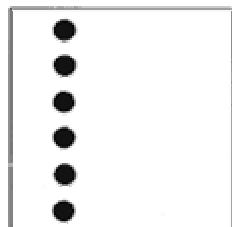

### Points

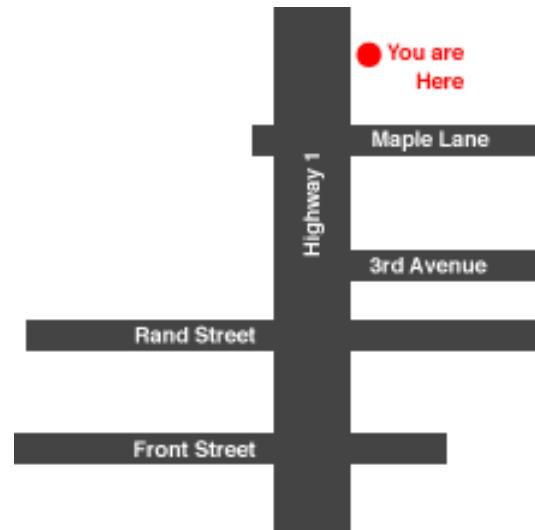

Symmetry/  
Asymmetry

Group/  
Dispersion

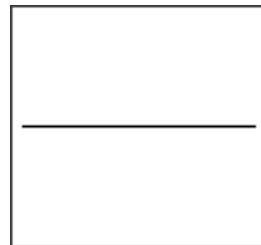

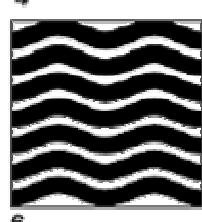

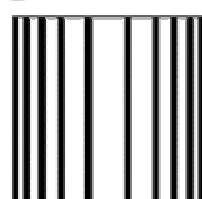

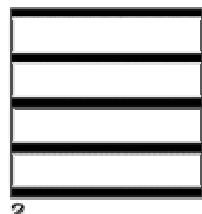

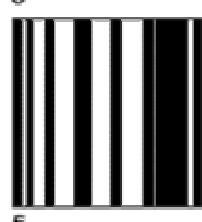

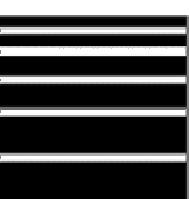

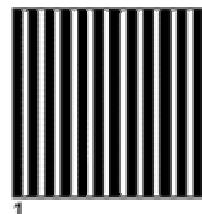

Line/  
Pattern/  
Structure

## Power of Images 3 – Elements of visual design

### Lines – horizontal and diagonal

The eye sight is more distinct in horizontal direction.

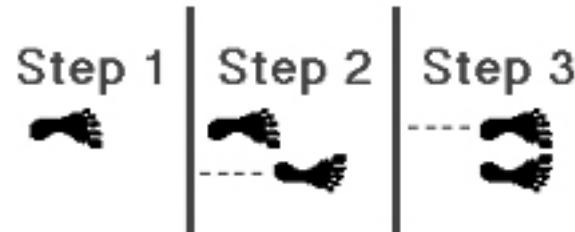

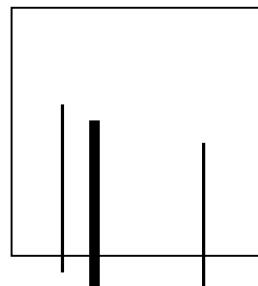

Therefore geometrically exact squares seem to be too flat.

Diagonal lines represent dynamic and movement.

## Power of Images 3 – Elements of visual design

### Lines - vertical

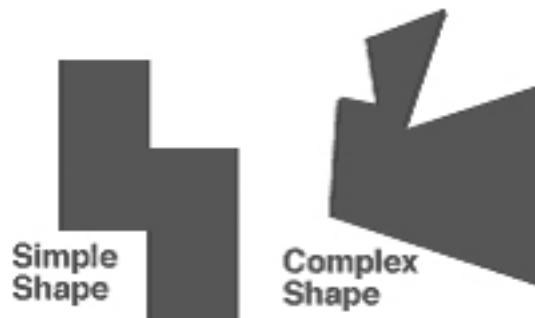

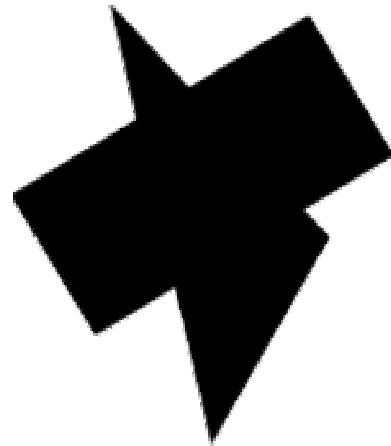

**Vertical lines interrupt or stop the movement of the sight.  
Thus they may limit thoughts.**

**They give structure and clarity.**

## Power of Images 3 – Elements of visual design

### Areas / Sententiousness (good „Gestalt“)

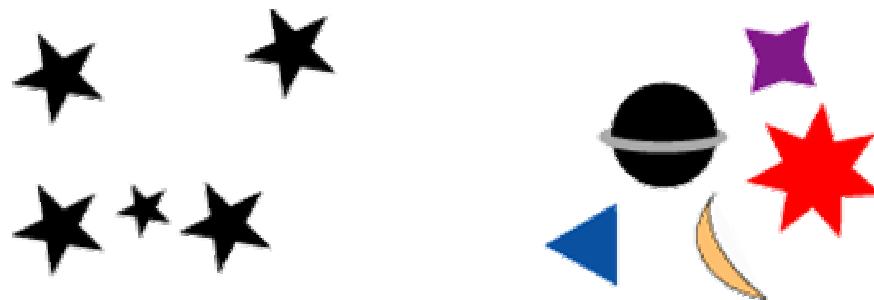

**Visual teaching aids should have simple shapes and symmetric layout.**

**This supports the concentration on the essentials.**

## Power of Images 4 – Principles of visual design

### Simplicity

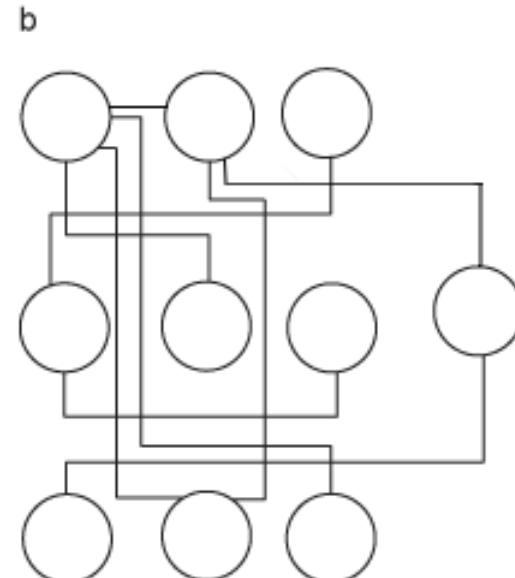

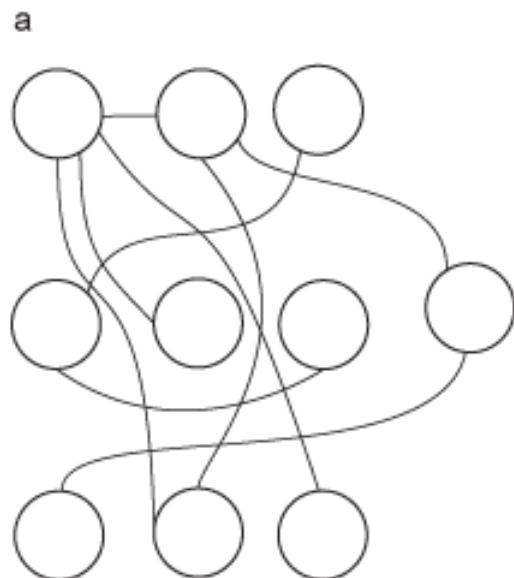

As perception is a process of simplification  
elements with multiple meaning can produce  
unintended results.

„Simple“ images are didactically more valuable  
than images with lots of information.

## Power of Images 4 – Principles of visual design

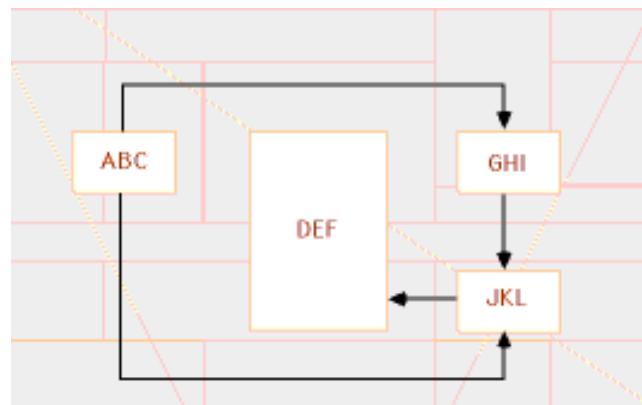

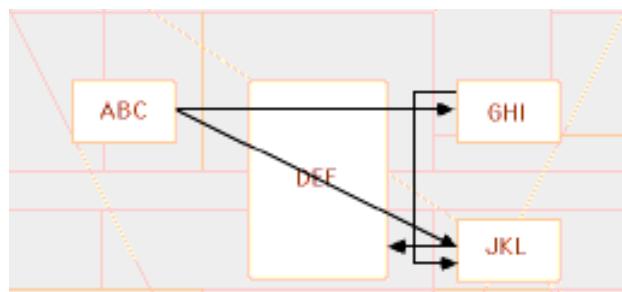

### Continuity 1

The eye sight instinctively continues the shapes.  
The lines of graphic „a“ show a smooth transition and are easier  
to percept than the hard angles of graphic „b“.

## Power of Images 4 - Principles of visual design

### Continuity 2

## Power of Images 4 - Principles of visual design

### Similarity 1

Δ	Δ	Δ	Δ	Δ	Δ
?	?	?	?	?	?
Δ	Δ	Δ	Δ	Δ	Δ
?	?	?	?	?	?
Δ	Δ	Δ	Δ	Δ	Δ
?	?	?	?	?	?
Δ	Δ	Δ	Δ	Δ	Δ
?	?	?	?	?	?

**According to the law of similarity  
visual stimuli with identical or  
similar structures  
are classified as connected.**

## Power of Images 4 - Principles of visual design

### Similarity 2

Minnegesang

Barock

Romantik

Johann (Hans) Jacob Christoph Grimmelshausen

Martin Opitz

Andreas Gryphius

Novalis

Joseph von Eichendorff

Clemens von Brentano

Dietmar von Aist

Heinrich von Morungen

Wolfram von Eschenbach

**Minnegesang**

Dietmar von Aist

Heinrich von Morungen

Wolfram von Eschenbach

**Barock**

Martin Opitz

Andreas Gryphius

Johann (Hans) Jacob Christoph Grimmelshausen

**Romantik**

Novalis

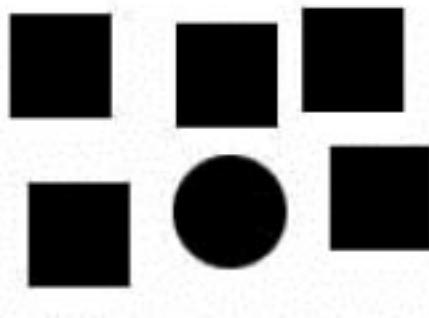

Clemens von Brentano

Joseph von Eichendorff

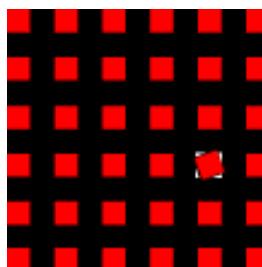

**Vicinity and similarity organize the information  
into a meaningful context.**

## Power of Images 4 - Principles of visual design

### Focus

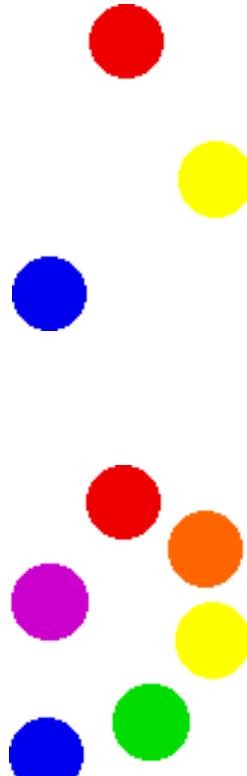

**Visual presentations should have clear accents in order to structure recognizable learning paths.**

**However the focus must be used in an economical way to avoid confusion.**

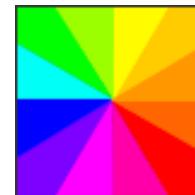

## Power of Images 4 - Principles of visual design

### Colour 1

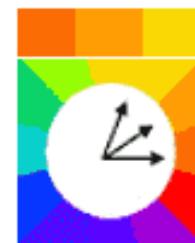

Primary colours

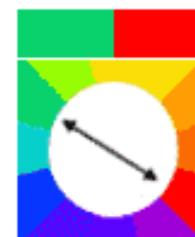

Secondary  
colours

Tertiary colours

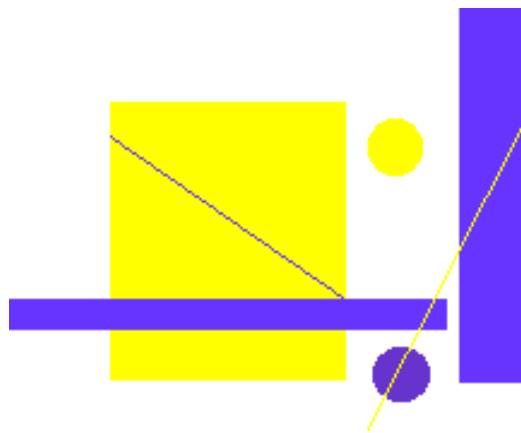

Analoge  
colour schema

Complementary  
colour schema

## Power of Images 4 - Principles of visual design

### Colour 2

Both graphics use complementary colours.

The strong contrast makes the view  
stressful and rather unpleasant.

## Power of Images 4 - Principles of visual design

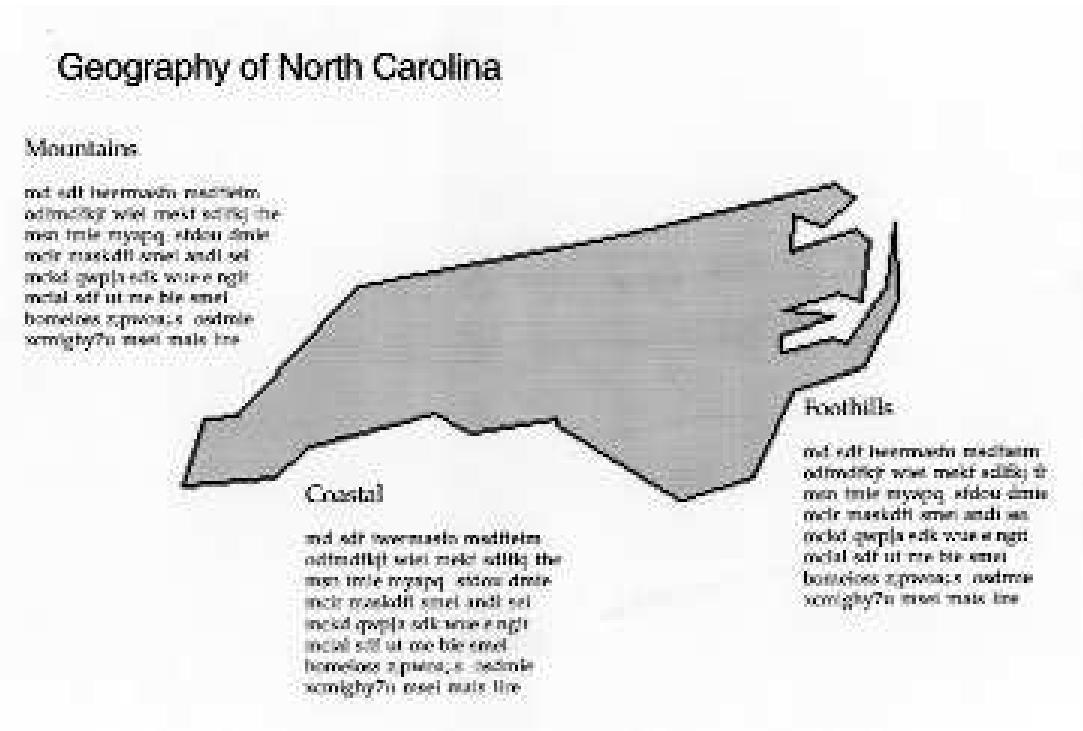

### Text and Image

#### References of text and image

- **Congruent:**  
The text describes what the image shows.
- **Complementary:**  
The text has blanks where the image fits in  
(and vice versa).
- **Elaborative:**  
The text surpasses the content of the image  
(and vice versa).

## Power of Images 4 - Principles of visual design

### Text and Image: Example 1

## Power of Images 4 - Principles of visual design

### Text and Image: Example 2

This is the area that we'll focus on for our discussion today.

### Geography of North Carolina

#### Major cities

and self-government includes defining what makes up the major cities in North Carolina. These include Charlotte, Raleigh, Durham, Winston-Salem, Greensboro, and Asheville.

#### Coastal

and self-government includes defining what makes up the coastal region of North Carolina. This includes the Outer Banks, the Research Triangle, and the Piedmont region.

#### Industries

and self-government includes defining what makes up the industrial sector in North Carolina. This includes the textile industry, pharmaceuticals, and food processing.

#### Foothills

and self-government includes defining what makes up the foothills region of North Carolina. This includes the Blue Ridge Mountains and the Great Smoky Mountains.

#### Mountains

and self-government includes defining what makes up the mountain region of North Carolina. This includes the Appalachian Mountains and the Great Smoky Mountains.

#### Important leaders from the state of North Carolina

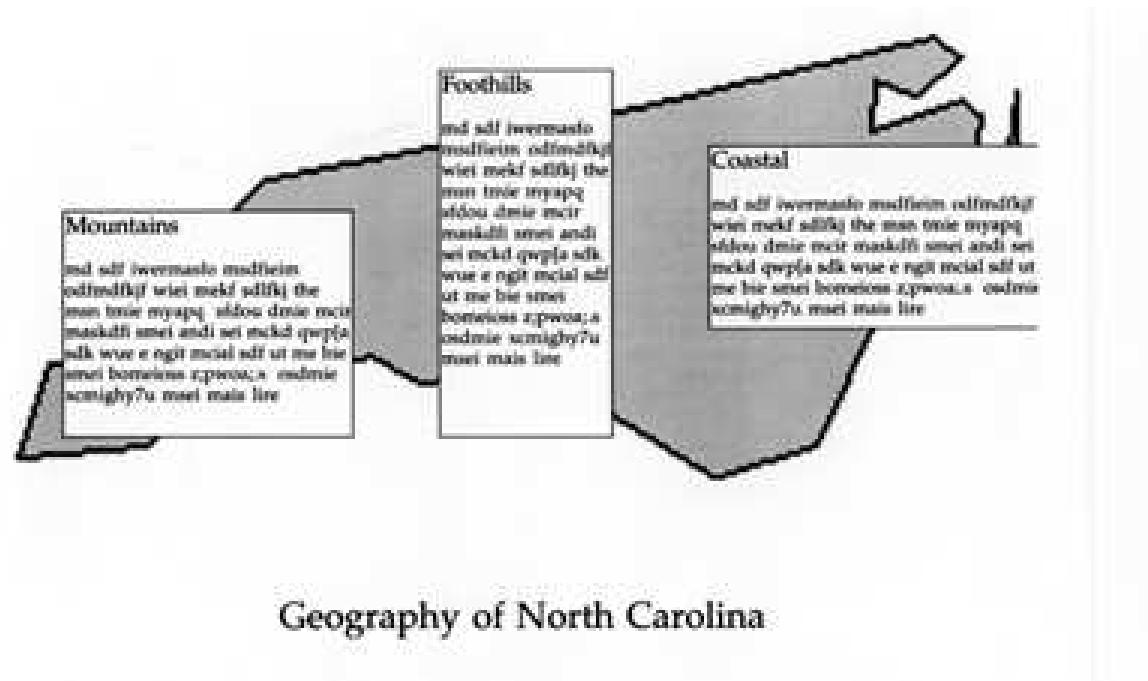

and self-government includes defining what makes up the political leadership in North Carolina. This includes former governors, senators, and members of Congress.

Remember that self-government is a right given to us by our ancestors.

For this region, self-government includes defining what makes up the local government.

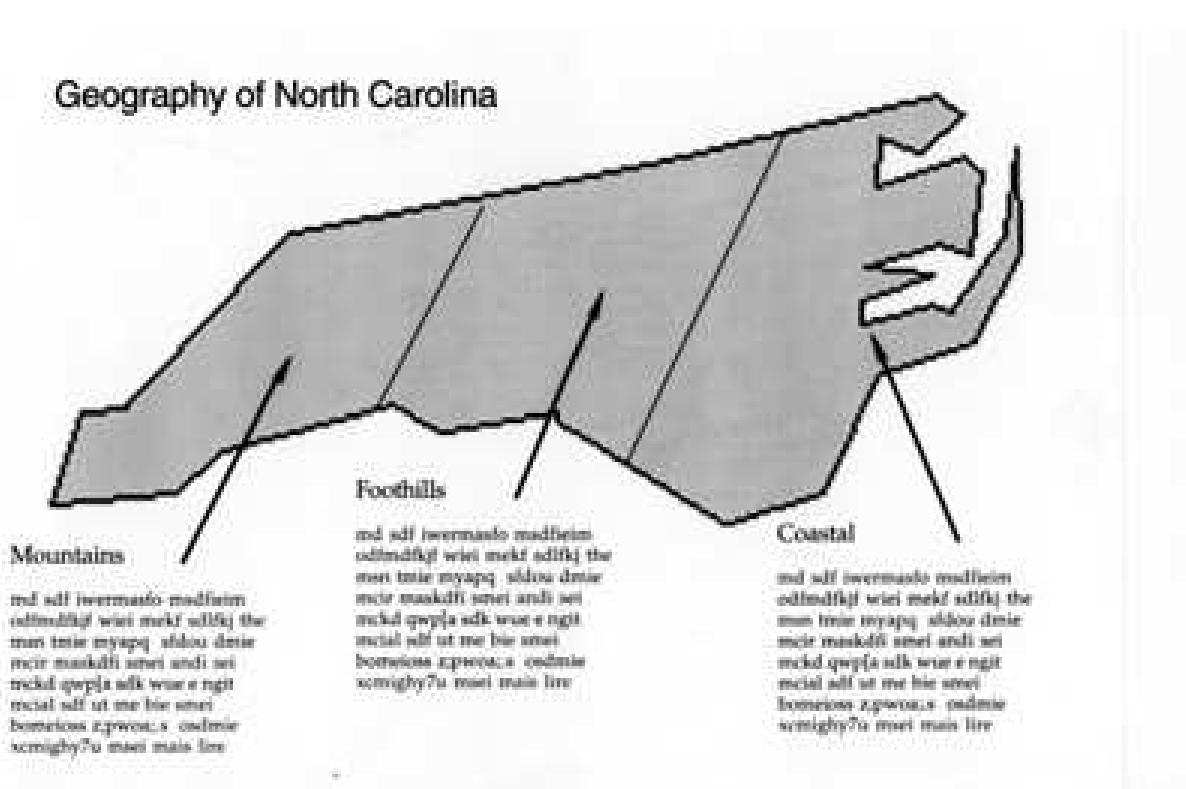

## Power of Images 4 - Principles of visual design

1. Introduction

2. Abstracts of Theory

3. The Power of Images

4. Methods of visual Learning

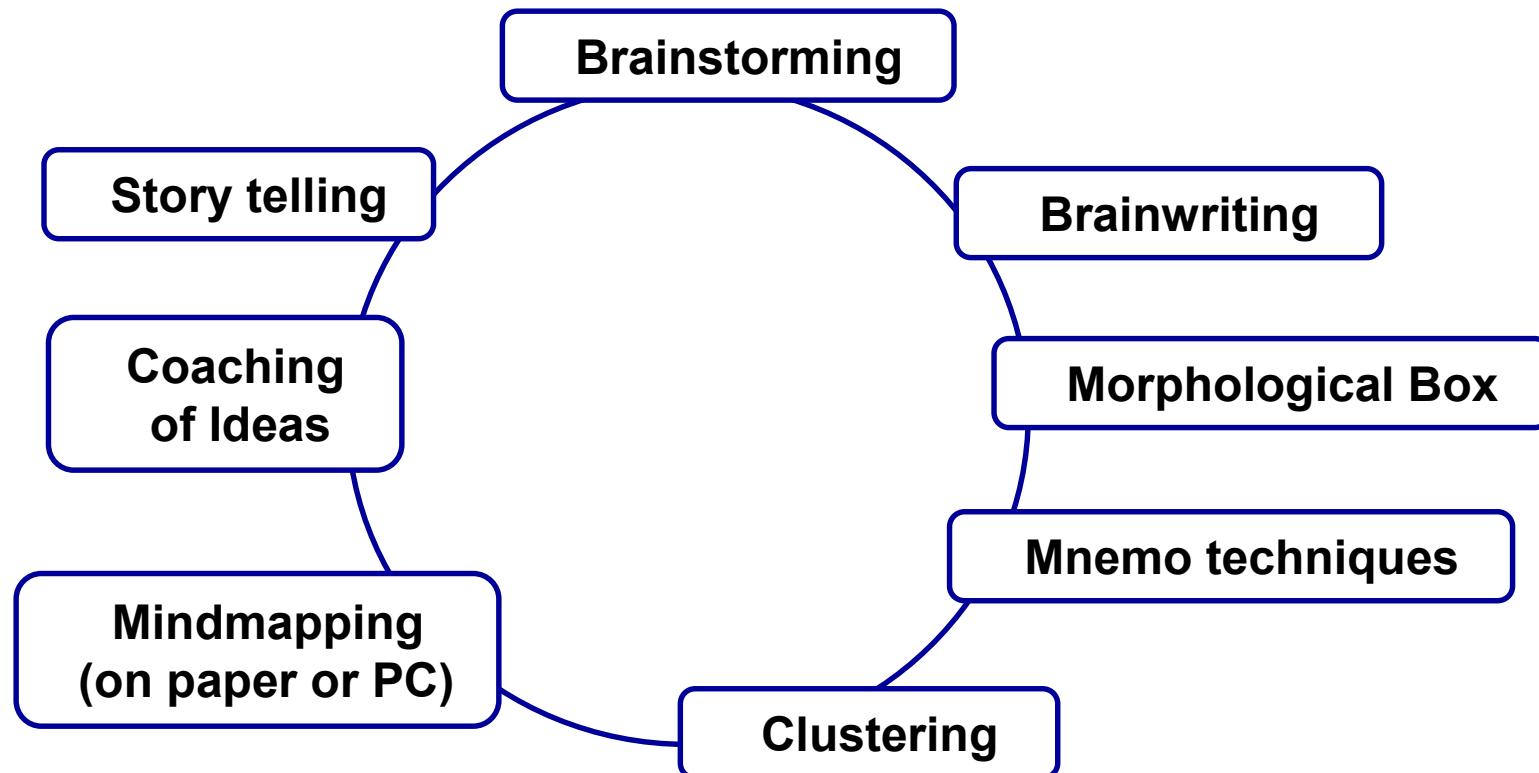

Program  
of the Training

Traditional creative techniques

Creative techniques  
with new media

## Methods of Visual Learning

### Circle of Methods:

## Methods of Visual Learning

### Mnemo technique

= technique of memorizing

**Principle: Connection of thoughts**

**Informations are not memorized in logical or natural context**

**but in associations and stories**

## Methods of Visual Learning

### Mnemo technique: Loci Method

The items to be memorized  
are linked to  
a path or a space.

## Methods of Visual Learning

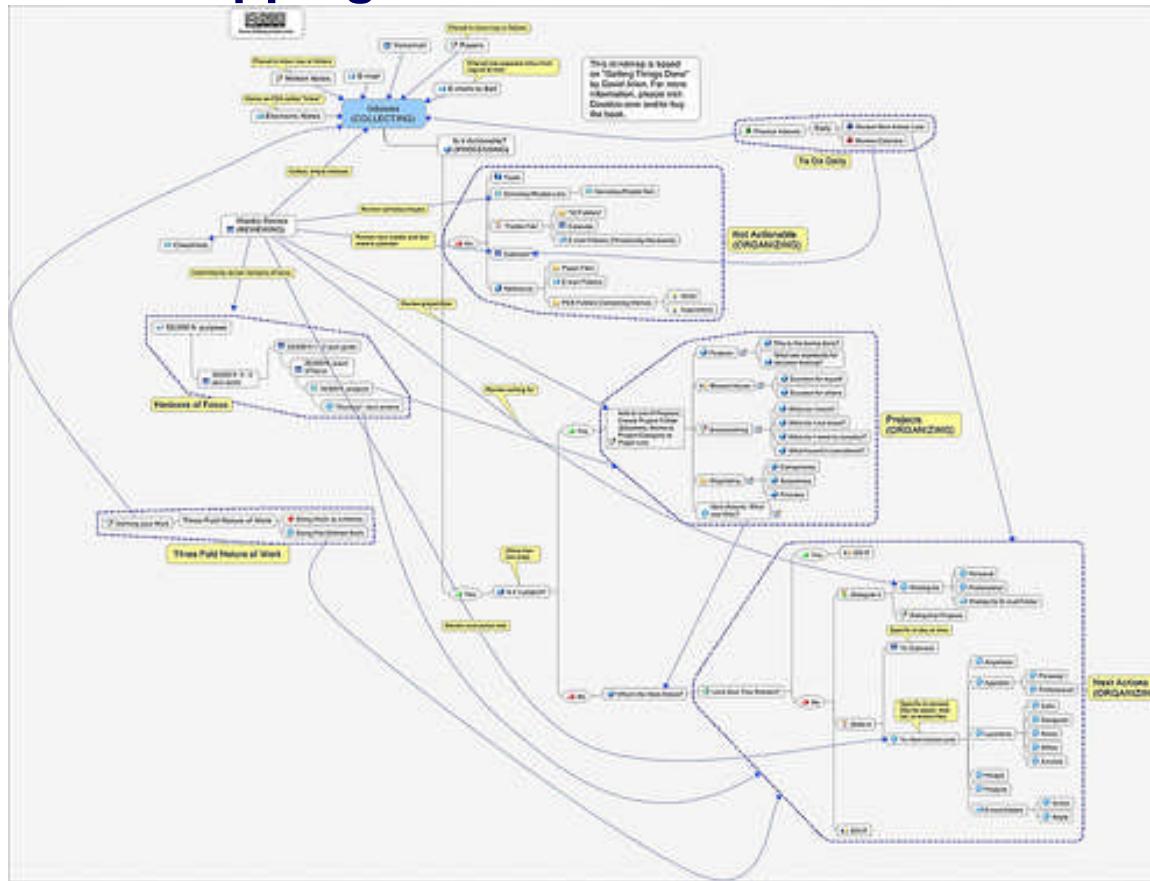

### Clustering

Method to find ideas,  
especially in case that  
the approach to the  
subject is difficult.

# Methods of Visual Learning

# Mind-Mapping

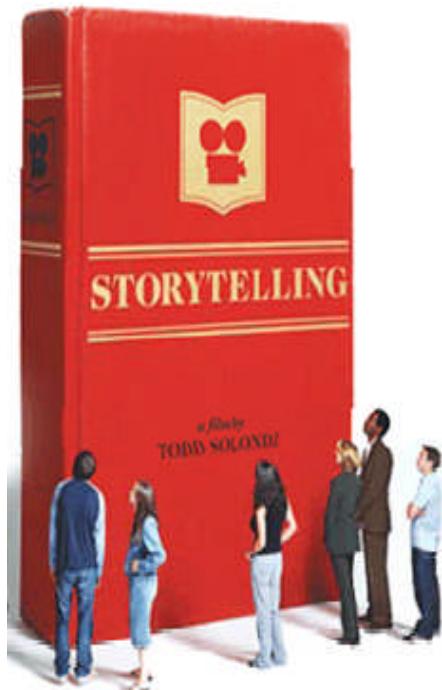

# Using software with PC:

## Freemind

## or Openmind

## Methods of Visual Learning

### Story telling

**This method builds knowledge by telling and listening.**

**The essential principle is the involvement of the listeners into the story.**

**Furthermore the story is not only listened to but also experienced by the participants.**

## Methods of Visual Learning

### Morphological Box - Principle

The Morphological Box is a morphologic-analytical creativity technique (morphology = the science of organized thinking) developed by the suiss astrophysician Fritz Zwicky (1898-1974).

The procedure:

1. Define the properties of a problem!
2. Register all possible forms of the properties!
3. Develop ideas by combination of the properties!

## Methods of Visual Learning

### Morphological Box - Example

**Problem: Creation of a new table**

<b>Number of legs</b>	0	1	3	4	5	100
<b>Material</b>	Wood	Glass	Plastic	Cork	Cloth	
<b>Height in cm</b>	0	20	50	70	100	200
<b>Form</b>	round	square	rect-angular			

**Idea: no legs, glass, 100 cm, round**

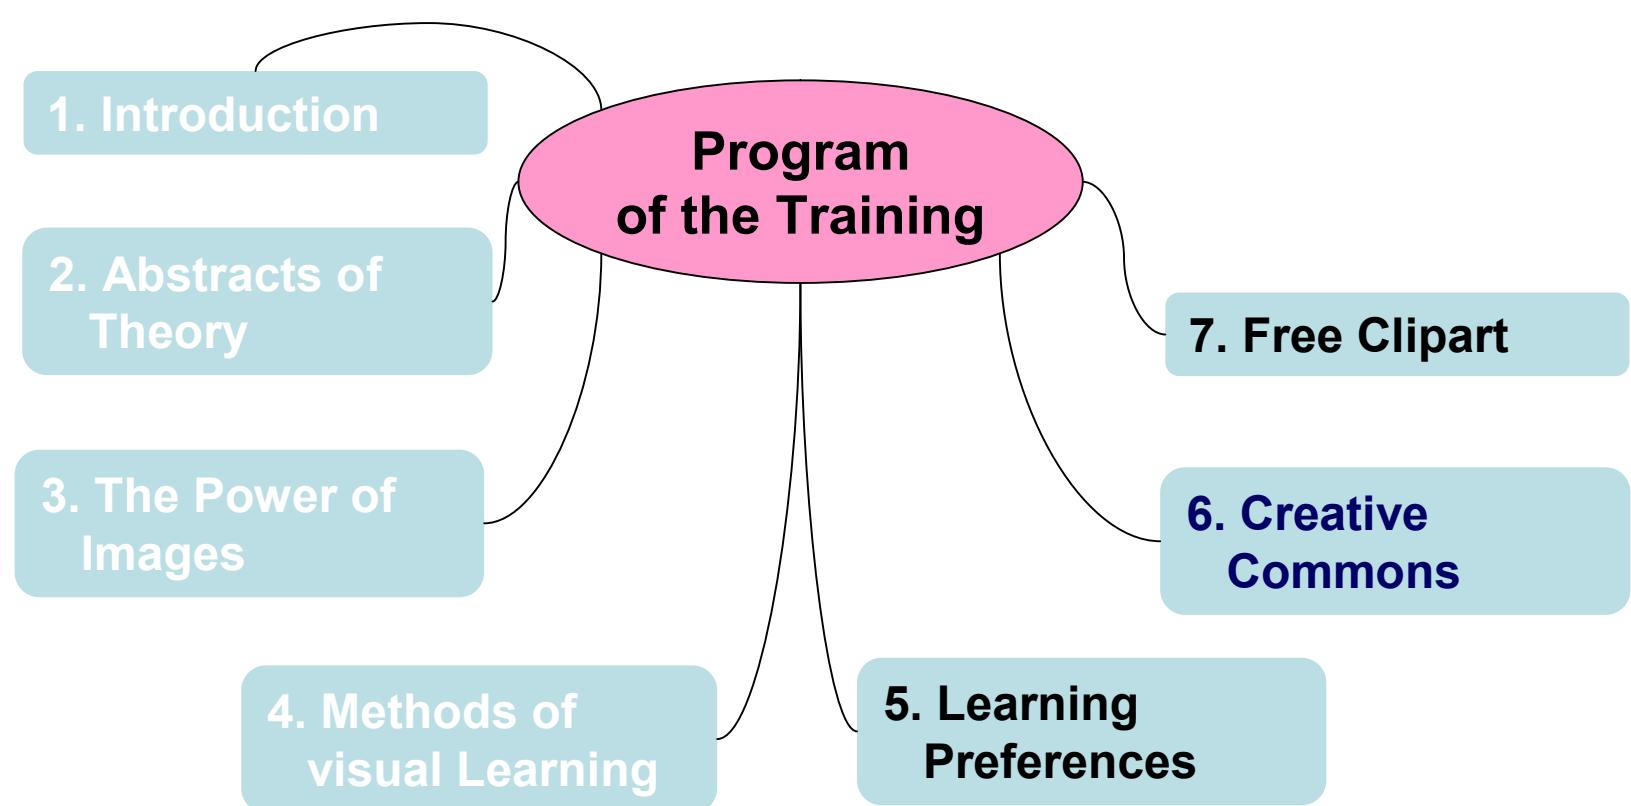

**The table hovers – may be hanging from the ceiling.**

## Methods of Visual Learning

Coaching of ideas (according to Mündemann, 2000)

### Procedure:

- Clear the way of looking at the problem (requests, conditions?)
- Are there techniques of handling?
- Defines learning targets
- Necessity of additional skills (advice?)?
- Associations to the didactic procedure
- Choice of methods to use (creativity techniques)

## Recherche for free Images
